Trust our experienced team at Dr. Maria's Abortion Clinic for compassionate care and comprehensive support throughout the process. In Dubai, Abu Dhabi, and Sharjah, where the discussion around abortion remains sensitive and legally restricted, accessing abortion pills such as Cytotec (misoprostol) and Mifepristone requires careful consideration and professional guidance. Many women opt for medication abortions due to privacy concerns or fear of the social stigma associated with surgical procedures. Before taking the abortion pill, it's essential to consult with a nurse, doctor, or healthcare provider. This initial consultation involves discussing whether abortion is the right decision, reviewing abortion options, and conducting necessary exams, lab tests, and possibly an ultrasound to determine the stage of pregnancy. The process of a medication abortion typically involves two medications: 1. Mifepristone: This pill halts the pregnancy's growth. 2. Misoprostol: Taken after Mifepristone, Misoprostol induces cramping and bleeding to expel the pregnancy tissue.
