**Need immediate help? Call the QuickBooks Payroll Support Phone Number:
1?855?510?4353**

Running a business on **QuickBooks multi-user mode** allows multiple team members to access the same company file from different computers. But when **QuickBooks Error H202** pops up, everything grinds to a halt.

This frustrating error usually appears when a workstation can't reach the server that hosts your QuickBooks company file. If you're seeing this issue, you're in the right place.

? What is QuickBooks Error H202?

QuickBooks Error H202 is a **multi-user mode connection issue** that occurs when the software can't connect to the company file located on another computer (typically a server). Instead of opening the file, you'll see a message like:

"You are trying to work with a company file located on another computer, and this copy of QuickBooks can't reach the server (H202)."

This means QuickBooks on your local machine (workstation) is **unable to communicate with the file hosting computer**.
